

5. [Maximum mark: 5]

Consider the following grouped data set.

Class	Frequency
$15 < y \leq 20$	31
$20 < y \leq 25$	42
$25 < y \leq 30$	61
$30 < y \leq 35$	46
$35 < y \leq 40$	29

(a) Find an estimate for

- (i) the mean;
- (ii) the standard deviation.

[2]

The data can be approximated by a normal distribution.

(b) Use this information and your mean and standard deviation found in part (a) to find an approximate value for the interquartile range correct to two significant figures.
